

# What is safe systems?

Safe systems is an amazing solution that makes roads **safe** for everyone

When someone makes a mistake on a road, people can get killed or badly hurt.

Safe systems protects against the mistakes people make. **It prevents crashes and stops people getting hurt on roads.**

This is how it works

1

## Safe vehicles

prevent crashes and protect our bodies so we don't get hurt if there is a crash.

2

## Safe roads

are designed for people not for traffic.

3

## Safe road users

look out for each other and keep themselves and other people safe.

4

If someone gets hurt on a road, we **get them help** really quickly. We **support** people who are sad because someone they love has been killed or hurt in a crash.

5

We **find out why crashes happen** so we can find ways to stop them from happening again.

The different parts of safe systems work **together** so we can all make **safe and healthy journeys** where we live, on **safe streets** that are designed for us.

No one should be hurt on roads. **Safe systems saves lives.**

We can make safe and healthy journeys to other places too, using a **bus** or a **train**. And we can **walk** or **cycle** to the station.
